**Centero Home from elero**

**Make your home a smarter place:**

Operate your building technology comfortably  
via mobile phone or tablet

- Totally simple and intuitive
- Locally in WiFi or remotely via cloud
- For more security and energy efficiency

Centero Home:

# Smart controls

are the key to a comfortable home.

Those using a smartphone and tablet to operate their building technology soon notice how indispensable these applications are. As the central control unit Centero Home brings together all the connected drives and devices to form one convenient, flexible system that can be controlled automatically or at the push of a button. Centero Home unites the functions of sun protection control and a timer switch, triggering commands and pre-defined flows in response to security sensors. When establishing scenes for roller shutters, as well as for heating and lighting systems, the focus is on the lifestyle habits and personal needs of the residents.

The Centero Home Box serves as the gateway and is connected to your router

The user app Centero Home is available for iOS® and Android™ devices

## With Centero Home you can control:

- All your visual and sun protection with elero radio drives and receivers
- Radio-controlled switchable sockets as well as lighting and heating elements with elero radio receivers
- Motion detectors and smoke alarms, window contacts, radiator thermostats and temperature sensors from Homematic
- Lighting systems from Philips Hue

More security thanks to reliable feedback
