**Silent Motion from elero**

**Rediscover tranquility:**

with the super quiet Motion drives  
for roller shutters

- Whisper mode or standard operation
- Controllable via hand-held transmitter  
or wall-mounted device
- Available as wireless or wired versions

# Silent Motion: Drives

with a quiet nature.

Is it possible to make drives that are fitted with a Soft brake, that have obstacle and blockage recognition and that also have a long service life and are gentle on fabrics, EVEN better? Yes, it is.

Silent Motion drives from elero ensure that your roller shutters move slowly and extremely quietly in the whisper mode. The baby can sleep on, conversation is not interrupted. The new standard in roller shutter automation means more creature comforts in your home.

#### How is the whisper mode activated?

- On the hand-held wireless transmitter the UP or DOWN button is pressed for a longer period.
- Automatic commands are also executed slowly and quietly with the wireless version, e.g. if all the roller shutters are opened on an upper floor using a time command.
- With wired drives the UP or DOWN button of the switch is activated using a “double click”.
